ENGINE.

BMW EFFICIENTDYNAMICS.
LESS EMISSIONS. MORE DRIVING PLEASURE.

BMW 220d

BMW TwinPower Turbo 4-Cylinder diesel engine with 140 kW (190 hp) and 400 Nm torque
Acceleration 0–100 km/h: 7.5 seconds
Top speed: 233 km/h
Combined fuel consumption: 18.64 km/l¹
Combined CO₂ emissions: 142 g/km¹

DYNAMICS AND EFFICIENCY

AERODYNAMICS.

Targeted Aerodynamic changes to the vehicle body such as, Air Curtain and Air Blades improve its air resistance. The airflow-optimised components contribute not only to reduced fuel consumption, but also reduces the level of noise in the interior.

DRIVING EXPERIENCE CONTROL INCL. ECO PRO.

The Driving Experience Control lets the driver choose between the standard COMFORT mode, ECO PRO mode which is geared towards efficiency, and SPORT mode which enables even more dynamic driving. ECO PRO mode adjusts the characteristics of the accelerator, steptronic transmission and the heating/air conditioning settings to make the drive as fuel-efficient as possible.

LAUNCH CONTROL.

With the Launch Control function, drivers benefit from the best possible acceleration with optimized traction and maximum dynamics from a standstill.

BMW EFFICIENT DYNAMICS.

Get more out of every litre of fuel with BMW Efficient Dynamics: better performance, greater efficiency and a heightened driving pleasure. Technical innovations that lower fuel consumption while simultaneously increasing driving pleasure mean that pure dynamics come standard in every BMW.

BRAKE ENERGY REGENERATION.

With Brake Energy Regeneration, the alternator generates electricity primarily when you brake or take your foot off the accelerator. Previously unused kinetic energy is thereby transformed into electrical energy and fed into the battery.

INTELLIGENT START/STOP FUNCTION.

The Intelligent Auto Start/Stop Function uses data from the navigation system, camera and if it is detected that further travel is imminent (e.g. during a turning manoeuvre), the engine is not automatically switched off when the vehicle stops.

SAFETY.

Equipment 07 | 08

LED Headlights with low-beam and high-beam using BI-LED technology as well as direction indicators in full LED technology. The equipment also features cornering lights and daytime running lights that help improve driving safety by optimally illuminating the road ahead..

Dynamic Stability Control (DSC) constantly assesses the vehicle's movements and ensures directional stability and traction.

Airbags for driver and front passenger are an integral part of the optimally coordinated safety components in a BMW. A total of six airbags offer targeted protection: driver and front passenger airbags, head airbags for the whole side window area, and side airbags in the front seat backrests.

Side-Impact Protection ensures greater safety. Thanks to the directions of the beams and node joints and selective use of high-strength materials, the functionally designed passenger cell structure provides maximum passive safety in the event of a front, side or rear impact.

The Runflat Indicator (TDI) warns the driver with a light in the Control Display when there is a slight drop in tyre pressure. When there is a large pressure drop, there is an additional acoustic warning.

Attentiveness Assistant analyses the driving behaviour of the driver and suggests when to take a break in the control display. Functions from 70 km/h and higher.

¹ Performance data as measured in the emission test done under controlled conditions of environment, driving cycle, fuel, etc. as specified in Rule 115 of Central Motor Vehicle Rules, 1989.

DRIVER ASSISTANCE AND CONNECTIVITY.
