PRODUCT INFORMATION

OVERVIEW

The most famous name in motorcycling. Bonneville stands for freedom, open roads, independence and some of the most stylish motorcycles ever made.

Still looking, sounding and feeling like a proper motorcycle should, today's Bonnie connects you to over 50 years of heritage but is built with everything that comes with modern engineering too.

We've made sure that, to this day, a Bonneville retains all that's great about the name. You still get the breathtaking looks on a bike that is dependable enough for everyday use, easy and fun to ride. All at an entry level price. So you can still feel the same ride today as they did way back.

ENGINE

Performance

From day one Bonnevilles have been built to be ridden, not just to look good. Today, this 865cc parallel twin puts out a healthy 68PS with 68Nm of torque at its peak, with plenty available at low revs so you get most use out of it. The fuelling is controlled by a sophisticated management computer programmed for clean emissions and a smooth, predictable throttle response. So there's enough performance to be fun for experienced riders but not so much that will intimidate riders with fewer miles behind them.

Configuration

A pair of cylinders still stand upright and proud at the heart of the Bonneville. With a wide bore and short stroke that adds up to 865cc for high levels of efficiency and low wear, with four valves per cylinder for the best breathing and power. There are balance shafts tucked away inside the crankcase so you'll notice very little vibration for a parallel twin and, being air cooled, there's no radiator to spoil the view.

ENGINE	
TYPE	Air-cooled, DOHC, parallel-twin, 360° firing interval
CAPACITY	865cc
BORE	90mm
STROKE	68mm
SYSTEM	Multipoint sequential electronic fuel injection with SAI
EXHAUST	Stainless steel headers, twin chromed upswept silencers
FINAL DRIVE	X ring chain
CLUTCH	Wet, multi-plate
GEARBOX	5-speed
OIL CAPACITY	4.5L

CHASSIS

Frame

All of our extensive chassis experience and technology has gone into the Bonneville's simple tubular steel construction. Providing easy, neutral steering and exceptional balance even at low speeds.

Bonneville

Handling

The chassis on a modern Bonneville is as good as the engine. In fact, the engine is part of the chassis. We've built a traditional style tubular steel cradle design and included the engine as an integral component for a stiffer, stronger chassis and more precise ride. Combining classic looks with modern engineering so that you get iconic Bonneville riding characteristics and modern handling.

Brakes

Inspired by the 1970s Bonneville, we've given the modern one a single disc brake at the front for a strong, progressive feel and a second disc for the rear producing performance alongside plenty of stopping force whilst maintaining the overall balance of the chassis so every moment of your ride is confident and controlled.

Wheels and Tyres

The cast aluminium wheels on the modern Bonneville look just like the ones on the 1970s but are much lighter, as well as bigger at 17 inches. This gives you easy, fluent handling and a more agile, involving ride.

Riding Position

The thing that makes the Bonneville a bike for riders new to big bikes as much as those into the classic style, is the riding position. The long flat seat suits riders of all heights and we've laid out the bars and footrests to create plenty of space so you won't feel cramped even on a long ride out. We've even added a grab rail, so your passenger can enjoy the journey too.

It's all put together so that you feel natural and in firm, confident control around town, at speed on a motorway or feeling the thrill of your Bonneville along a sinuous back road.

Seat Height

A seat height of just 740mm is the best way to get the classic, natural Bonneville riding position. So that's the height we set it at.

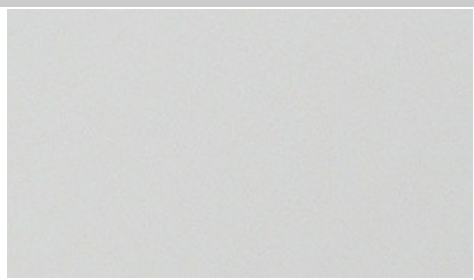

Suspension

Looking good whilst working hard isn't easy. But the 1960s style twin shocks fitted at the back come with a chrome finish and modern damping internals. As do the traditional-looking forks. And that makes the ride of your Bonneville smooth and controlled, even on bumpy roads and cornering at speed.

CHASSIS

FRAME	Tubular steel cradle
SWINGARM	Twin-sided, tubular steel
FRONT WHEELS	Cast aluminium alloy, 7-spoke, 17 x 3.0 inch
REAR WHEELS	Cast aluminium alloy, 7-spoke, 17 x 3.5 inch
